

Door Measuring Sheet

Left Height mm Middle Height mm Right Height mm

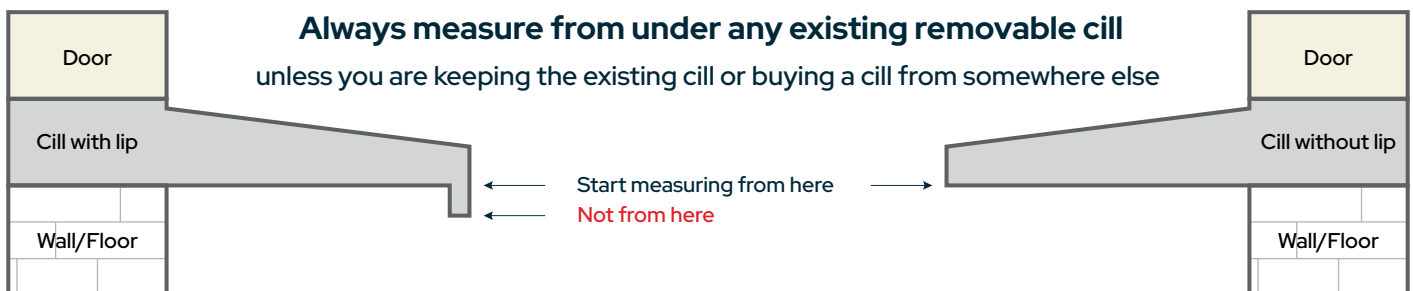

Smallest width mm - 10mm = Order width mm, to be used on the website.

Smallest height mm - 10mm = Order height mm, to be used on the website.

Summary Guide

- Measure your door from the outside of the property.
- Measure the brickwork opening in 3 places for both width and height.
- Of the 3 measurements use the smallest and deduct approximately 10mm, that's your order size.
- Always measure in millimetres (mm).
- The height measurements must be from underneath of any existing removable cill (except stone cills or if you're ordering doors without cills).
- If your property is rendered, remove some render and measure to the brickwork edge.

Please note: We are unable to accept responsibility for incorrect measurements. If you are unsure we recommend that you consult a professional installer/builder.
